

# Universal Serial Bus Micro-USB Cables and Connectors Specification

Revision 1.01

*April 4, 2007*

## Revision History

Revision	Issue Date	Comment
0.6	1/30/2006	Revisions to all sections
0.7	3/24/2006	Added revised Micro-USB drawings to Rev.0.8
0.8	4/19/2006	Editorial changes and additions by Jan Fahllund (Nokia)
0.8b	4/26/2006	Corrections to the 0.8 version (based by comments from contributors)
0.9	6/7/2006	Corrections based on comments from the 0.8b version
1.0RC	8/2/2006	Added lubricant recommendation, LLRC delta change specified
1.01RC	11/10/2006	Editorial changes and addition based on Oct-06 USB-IF CCWG meeting.
1.02RC	12/10/2006	Shell material thickness tolerances changed so that material can be 0.25 mm or 0.3 mm; edited three pictures (Figure 4-10, 4-11 and 4-12).
1.03RC	12/11/2006	Two pictures edited (Figure 4-8 and 4-9). In fig 4-8 max height to be 2.8mm MAX. In fig 4-9 R0.25mm MAX to be R0.30mm MAX.
1.0RC3	12/19/2006	For BoD approval
1.0	1/12/2007	Approved
1.0	1/22/2007	Cosmetic edits for publication
1.01	4/4/2007	Editorial corrections and additions to contributor list. Reinserted shell and plug material requirements as section 6.10. Clarified wording on Plating Recommendations.

# 1 Introduction

## 1.1 General

USB has become a popular interface for exchanging data between cell phone and portable devices. Many of these devices have become so small it is impossible to use standard USB components as defined in the USB 2.0 specification. In addition the durability requirements of the Cell Phone and Portable Devices market exceed the specifications of the current interconnects. Since Cell Phones and other small Portable Devices are the largest market potential for USB, this specification is addressing this very large market while meeting all the requirements for electrical performance within the USB 2.0 specification.

## 1.2 Objective of the Specification

The purpose of this document is to define the requirements and features of a Micro-USB connector that will meet the current and future needs of the Cell Phone and Portable Devices markets, while conforming to the USB 2.0 specification for performance, physical size and shape of the Micro-USB interconnect.

This is not a stand-alone document. Any aspects of USB that are not specifically changed by this specification are governed by the USB 2.0 Specification and USB On-The-Go Supplement.

## 1.3 Intended Audience/Scope

Cell phone and Portable Devices have become so thin that the current Mini-USB does not fit well within the constraints of future designs. Additional requirements for a more rugged connector that will have durability past 10,000 cycles and still meet the USB 2.0 specification for mechanical and electrical performance was also a consideration. The Mini-USB could not be modified and remain backward compatible to the existing connector as defined in the USB OTG specification.

## 1.4 Related Documents

USB 2.0

USB OTG Supplement

## 2 Acronyms and Terms

This chapter lists and defines terms and abbreviations used throughout this specification.

<b>A-Device</b>	A device with a Type-A plug inserted into its receptacle. The A-device supplies power to VBUS and is host at the start of a session. If the A-device is On-The-Go, it may relinquish the role of host to an On-The-Go B-device under certain conditions,
<b>Application</b>	A generic term referring to any software that is running on a device that can control the behavior or actions of the USB port(s) on a device.
<b>B-Device</b>	A device with a Type-B plug inserted into its receptacle. The B-device is a peripheral at the start of a session. If the B-device is OTG, it may be granted the role of host from an OTG A-device.
<b>DIP-type</b>	A connector with contact and shield solder tails that are soldered through the printed circuit board
<b>FS</b>	Full Speed (max 12Mb/s)
<b>Higher than HS</b>	(480Mb/s ---> 5 Gb/s)
<b>HS</b>	High Speed (max 480 Mb/s)
<b>Host</b>	A physical entity that is attached to a USB cable and is acting in the role of the USB host as defined in the USB Specification, Revision 2.0. This entity initiates all data transactions and provides periodic Start of Frames.
<b>HNP</b>	Host Negotiation Protocol
<b>ID</b>	Identification. Denotes the pin on the Micro connectors that is used to differentiate a Micro-A plug from a Micro-B plug.
<b>LS</b>	Low Speed (max 1,5 Mb/s)
<b>Midmount-type</b>	A connector that is mounted in a cut-out in the printed circuit board between the top and bottom surfaces.
<b>OTG</b>	On-The-Go
<b>OTG device</b>	A device with the host and peripheral capabilities
<b>Peripheral</b>	A physical entity that is attached to a USB cable and is currently operating as a “device” as defined in the USB Specification, Revision 2.0. The Peripheral responds to low level bus requests from the Host.
<b>PCB</b>	Printed circuit board
<b>USB</b>	Universal Serial Bus
<b>USB-IF</b>	USB Implementers Forum

### 3 Significant Features

This section identifies the significant features of the Micro-USB specification. The purpose of this section is not to present all the technical details associated with each major feature, but rather to highlight its existence. Where appropriate, this section references other parts of the document where further details can be found.

#### 3.1 USB 2.0 Specification Compliance

Any device with Micro-USB features is first and foremost a USB peripheral that is compliant with the USB 2.0 specification.

#### 3.2 On-The-Go Device

Any OTG Micro-USB device shall conform to the OTG requirements as set forth in the On-The-Go Supplement to the USB 2.0 Specification.

#### 3.3 Connectors

The USB 2.0 specification defines the following connectors:

- Standard-A plug and receptacle,
- Standard-B plug and receptacle, and
- Mini-B plug and receptacle.

The Micro-USB specification defines the following additional connectors:

- Micro-B plug and receptacle
- Micro-AB receptacle
- Micro-A plug.

The Micro-AB receptacle is only allowed on OTG products. All other uses of the Micro-AB receptacle are prohibited. The Micro-AB receptacle accepts either a Micro-A plug or a Micro-B plug.

It is recommended that the Micro-AB continue to support HNP as requested and support full functionality as a peripheral when a Micro-B plug is inserted.

#### 3.4 Compliant Cable Assemblies

The USB 2.0 specification defines the following cables:

- Standard-A plug to Standard-B plug,
- Standard-A plug to Mini-B plug, and
- Captive cable with Standard-A plug.

The Micro-USB specification defines the following additional cables:

- Micro-A plug to Micro-B plug,
- Micro-A plug to Standard-A receptacle
- Micro-B plug to Standard-A plug, and
- Hardwired Captive cable with Micro-A plug. (Hardwired Captive cable is a cable, connected internally to a device, which is not designed to be removed by the end user of that device.)

No other types of cables are allowed by either the USB specification, or by the OTG supplement. Cables are not allowed to have receptacles on either end unless they meet the mechanical and electrical requirements of adapters defined in this document.

### 3.5 Plug Overmolds

The Micro-USB specification constrains the size and the shape of the overmolds for the Micro-A and Micro-B plugs.

The Micro-A plug's overmold has a rectangular shape, and the Micro-B plug's overmold is rectangular with chamfers. This allows easy recognition and differentiation of the two plugs by the consumer. See pictures Figure 4-4 and Figure 4-5.

## 4 Cables and Connectors

### 4.1 Introduction

This chapter provides the mechanical and electrical specifications for the cables, connectors and cable assemblies used to interconnect devices as well as constraints on the design of the overmolds for the Micro-A and Micro-B plugs.

### 4.2 Micro-Connector Mating

The following table summarizes the plugs accepted by each of the receptacles.

**Table 4-1. Plugs Accepted By Receptacles**

Receptacle	Plugs Accepted
Standard-A	Standard-A
Standard-B	Standard-B
Mini-B	Mini-B
Micro-B	Micro-B
Micro-AB	Micro-A or Micro-B

The usage and wiring assignments of the five pins in the Micro-A plug are defined in the following table.

**Table 4-2. Micro-A Plug Pin Assignments**

Contact Number	Signal Name	Typical Wiring Assignment
1	VBUS	Red
2	D-	White
3	D+	Green
4	ID	<Ra_PLUG_ID
5	GND	Black
Shell	Shield	Drain Wire

The ID pin on a Micro-A plug shall be connected to the GND pin. The ID pin on a Micro-B plug is not connected or is connected to ground by a resistance of greater than Rb\_PLUG\_ID (100kΩ MIN). An On-The-Go device is required to be able to detect whether a Micro-A or Micro-B plug is inserted by determining if the ID pin resistance to ground is less than Ra\_PLUG\_ID (10Ω MAX) or if the resistance to ground is greater than Rb\_PLUG\_ID. Any ID resistance less than Ra\_PLUG\_ID shall be treated as ID = FALSE and any resistance greater than Rb\_PLUG\_ID shall be treated as ID = TRUE.

### 4.3 Color Coding

The following colors are mandated for the plastic inside the Micro-USB connectors defined in this specification.

**Table 4-3. Color Coding for Plugs and Receptacles**

Connector	Color
Micro-A plug	White
Micro-B receptacle	Black
Micro-B plug	Black
Micro-AB receptacle	Gray

### 4.4 Device, Cable and Adapter Delays

In Figure 7-11 of the USB 2.0 specification, four test planes are defined along the transmission path from the host transceivers to the peripheral transceivers. These test planes (TP) are as follows:

- TP1: pins of host transceiver chip
- TP2: contact points of host Standard-A receptacle
- TP3: contact points of peripheral Standard-B or Micro-B receptacle
- TP4: pins of peripheral transceiver chip

The maximum total delays are as follows:

- On-The-Go device - TP1 to TP2: 1 ns
- Adapter: 1 ns
- Any cable with a Micro-A or Micro-B plug: 10 ns

The maximum delays for the two worst cases of connection are shown in the following tables.

**Table 4-4. Maximum Delay for Micro-Connector and Cable**

Location	Delay Time
USB 2.0 Compliant Host – TP1 to TP2	3 ns
Standard-A receptacle to Micro-A plug adapter	1 ns
Micro-A plug to Micro-B plug cable	10 ns
USB 2.0 Compliant B-device – TP3-TP4	1 ns
Total	15 ns

**Table 4-5. Maximum Delay for Standard Connector Cable**

Location	Delay Time
On-The-Go Compliant Device – TP1 to TP2	1 ns
Micro-A plug to Standard-A receptacle adapter	1 ns
Standard-A plug to Standard-B plug cable	26 ns
USB 2.0 Compliant B-device – TP3 to TP4	1 ns
Total	29 ns

## 4.5 Compliant Usage of Connectors and Cables

Cable assemblies and connectors not described below or not allowed by other amendments to the USB specification are not compliant with the USB specification and may not be labeled as such.

### 4.5.1 Cables

The cables allowed by the Micro-USB specification are shown in Figure 4-1, Figure 4-2, and Figure 4-3. Cables must have a propagation delay of 10 ns or less, have a physical length of no more than 2.0 meters, and meet all other requirements of a USB cable.

### 4.5.2 Overmolds

The size and shape of the Micro-A and Micro-B plug overmolds must conform to the constraints shown in Figure 4-4 and Figure 4-5 .

### 4.5.3 Mechanical Interfaces

The mechanical interface dimensions for the Micro-A and Micro-B plugs are shown in Figure 4-6 and Figure 4-7. Mechanical interface dimensions for Micro-AB and Micro-B receptacles are shown in Figure 4-9 and Figure 4-10.

### 4.5.4 Surface mount standard version drawings

By following these instructions, receptacles from different manufacturers can be used interchangeably on the same printed circuit board (PCB). In the case of the “surface mount standard version”, the dimensions of the contact tail and shield tail must comply with figures 4-11 and 4-12.

Note: PCB-layout drawings are included for reference only.

Figure 4-11 and Figure4-12 shows designs for the Micro-AB and Micro-B receptacles respectively.

### 4.5.5 DIP-type and Midmount-type receptacles

DIP-type (contact and shield tails soldered through PCB) and Midmount-type (connector that is mounted in a cut-out in the printed circuit board between the top and bottom surfaces.) receptacle connectors are not defined in this standards document. These mounting styles are allowed under the standard as long as all intermating conditions are met. Mechanical dimensions and mechanical durability values may vary from the Surface mount standard connector but must comply with all minimum values.

### 4.5.6 Connector Keying

This Micro connector series has been designed so as to prevent the Micro-A and Micro-B plugs from being incorrectly inserted into a receptacle. The amount of metal blocking various possible incorrect insertions is shown in Figure 4-13 and Figure 4-14, and is always greater than 0.35 mm.

### 4.5.7 Right Angle Plugs

The overmolds for right / down angle plugs are required to comply with the same shape constraints that apply to straight plugs. Reference drawings for right / down angle plugs are shown in Figure 4-15, Figure 4-16, Figure 4-17 and Figure 4-18 .

#### 4.5.8 Adapters

Requirements:

- The propagation delay of the adapter shall be less than 1 ns.
- The physical length shall not exceed 150 mm.
- The resistance of the adapter through VBUS and GND, including contacts, shall not exceed 70 m $\Omega$ .

##### 4.5.8.1 Standard-A receptacle to Micro-A plug

This adapter is used to connect a cable with a Standard-A plug to an On-The-Go device that has a Micro-AB receptacle. A reference drawing for this adapter is shown in Figure 4-19.

#### 4.6 Drawings

This section contains the mechanical drawings that are referenced in the previous section.

## 5 Electrical Compliance Requirements

Electrical requirements are unchanged from the USB 2.0 specification (Chapter 6; Table 6-7) and the On-The-Go Supplement to the USB 2.0 Specification, unless otherwise specified here.

### 5.1 Data Rates Beyond USB 2.0 (480Mb/s -->)

This section will be amended as requirements for higher data rates (beyond the current USB 2.0 specification) become available.

### 5.2 Low Level Contact Resistance

**30m $\Omega$**  (Max) initial when measured at 20mV (Max) open circuit at 100mA. Maximum change (delta) of **+10 m $\Omega$**  after 10,000 insertion/extraction cycles at a maximum rate of 500 cycles per hour. (When manually operated, mating speed should be below 200 cycles per hour.)

### 5.3 Contact Current Rating

#### 5.3.1 Signal Contacts Only (2, 3, and 4)

1A minimum when measured at an ambient temperature of 25 degrees Celsius. With power applied to the contacts, the delta temperature must not exceed +30degrees Celsius at any point in the USB connector under test.

#### 5.3.2 With Power Applied Contacts (1 and 5)

1.8A for contacts 1 and 5 and at the same time 0.5A for contacts 2, 3 & 4, minimum when measured at an ambient temperature of 25 degrees Celsius. With power applied to the contacts, the delta temperature must not exceed +30degrees Celsius at any point in the USB connector under test.

## 6 Mechanical Compliance Requirements

The following requirements will take precedence over the requirements set forth in the USB 2.0 specification (Chapter 6; Table 6-8) and the On-The-Go Supplement to the USB 2.0 Specification.

### 6.1 Operating Temperature Range

#### 6.1.1 Option I

-30°C to +80°C

#### 6.1.2 Option II

-30°C to +85°C (and above)

### 6.2 Insertion Force

Recommendations:

- It is recommend to use a non-silicon based lubricant on the latching mechanism to reduce wear. If used the lubricant may not affect any other characteristic of the system.
- 35 Newton's maximum at a maximum rate of 12.5 mm(0.492") per minute.

### 6.3 Extraction Force

- 8N (MIN) after 10000 insertion/extraction cycles (at a maximum rate of 12.5mm (0.492") per minute).
- No burrs or sharp edges are allowed on top of locking latches (hook surfaces which will rub against receptacle shield).
- It is recommend to use a non-silicon based lubricant on the latching mechanism to reduce wear. If used the lubricant may not affect any other characteristic of the system.

### 6.4 Plating

Recommendations:

- Contact plating should be done after stamping and forming
- Burrs should not be present on contact areas
- Contact area as smooth as possible before plating
- Use a sealing treatment to control plating porosity (contact area)

#### 6.4.1 Option I

##### 6.4.1.1 Receptacle

Contact area: (Min) 0.05  $\mu\text{m}$  Au + (Min) 0.75  $\mu\text{m}$  Ni-Pd on top of (Min) 2.0  $\mu\text{m}$  Ni

Contact tail: (Min) 0.05  $\mu\text{m}$  Au on top of (Min) 2.0  $\mu\text{m}$  Ni

##### 6.4.1.2 Plug

Contact area: (Min) 0.05  $\mu\text{m}$  Au + (Min) 0.75  $\mu\text{m}$  Ni-Pd on top of (Min) 2.0  $\mu\text{m}$  Ni

#### 6.4.2 Option II

##### 6.4.2.1 Receptacle

Contact area: (Min) 0.75  $\mu\text{m}$  Au on top of (Min) 2.0  $\mu\text{m}$  Ni

Contact tail: (Min) 0.05  $\mu\text{m}$  Au on top of (Min) 2.0  $\mu\text{m}$  Ni

##### 6.4.2.2 Plug

Contact area: (Min) 0.75  $\mu\text{m}$  Au on top of (Min) 2.0  $\mu\text{m}$  Ni

#### 6.5 Solderability

Solder shall cover a minimum of 95% of the surface being immersed, when soldered at temperature 255°C  $\pm$  5°C for immersion duration 5S (component is to be lead-free component) using Type R flux.

#### 6.6 Peel Strength (Reference Only)

Minimum 150N when soldered connector is pulled up from PCB in the vertical direction.

#### 6.7 Wrenching Strength (Reference Only)

Perpendicular Force Test : This test shall be performed using virgin parts. Perpendicular forces ( $F_p$ ) are applied to a plug when inserted at a distance (L) of 15mm from the edge of the receptacle. Testing conditions & method should be agreed with all parties. These forces are to four direction (left, right, up, down). Compliant connectors will meet the following force thresholds with the following results :

- No plug or receptacle damage: 0 - 25N

- The plug can be damaged, but in such a way that the receptacle does not sustain damage: 25 - 50N

#### 6.8 Lead Co-Planarity

Co-planarity of all SMT leads shall be within 0.08mm range.

## 6.9 RoHS Compliance

Component is to be RoHS compliant. Lead Free plug and receptacle materials must conform to Directive 2002/95/EC of January 27, 2003 on Restriction of Hazardous Substances (RoHS).

## 6.10 Shell & Latch Materials

Shell and latch materials for both plug and receptacle shall be stainless steel or mechanically equivalent material.
